

DANIEL HENRIQUEZ

FULL STACK ENGINEER | CTO | BACKEND & SAAS ARCHITECTURE

Cartagena, Colombia | Remote-ready | danieldhj07@gmail.com | danieldhj.dev

LinkedIn: linkedin.com/in/daniel-david-henriquez-julio-71327a310 | GitHub: github.com/Danieldavidhenriquezjulio | github.com/danieldhj

PROFESSIONAL SUMMARY

Full Stack Engineer and CTO with experience taking SaaS products from zero to production across faith-tech, fintech, and restaurant-management domains. Strong in multi-tenant architecture, backend/API design, real-time systems, data modeling, and delivery ownership. Builds with Next.js, NestJS, Django, React, PostgreSQL, Redis, and cloud-ready tooling; currently expanding backend expertise with Go. Comfortable translating product requirements into reliable systems and shipping end-to-end features.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, Dart, SQL; Go (learning)

Frontend: React, Next.js, Astro, Tailwind CSS, HTML5, CSS3

Backend: NestJS, Django, Node.js, Spring Boot, REST APIs, WebSockets, authentication, multi-tenant systems

Data & Infrastructure: PostgreSQL, Redis, BullMQ, Prisma, Docker, database design, query optimization

Deployment & Cloud: Vercel for Next.js and frontend deployment; Azure fundamentals for cloud services, deployment, and basic configuration

Product & Delivery: Technical leadership, system architecture, third-party integrations, real-time features, MVP-to-production delivery

PROFESSIONAL EXPERIENCE

CTO & Lead Engineer | Fe Viva | 2024 – Present

- Lead end-to-end development of a faith-tech platform with community features, Bible reading plans, prayer requests, and pastoral dashboards.
- Architect multi-tenant data models and real-time application flows with Next.js, Prisma, PostgreSQL, and event-driven integrations.
- Own technical decisions from product discovery and API design through deployment, iteration, and operational reliability.

Full Stack Developer | Aldeor | 2024 – Present

- Build a multi-tenant restaurant-management SaaS for the LATAM market, including DIAN electronic invoicing and operational workflows.
- Develop real-time order processing and background jobs with NestJS, Redis, BullMQ, and PostgreSQL.
- Contribute to AI-assisted inventory-management capabilities while balancing domain rules, reliability, and maintainability.

Full Stack Developer | HassleFreePay | 2024

- Developed a digital-wallet experience that unified access to Colombian banking providers through the Belvo API.
- Implemented frontend and backend workflows with React, Django, and PostgreSQL for financial data aggregation and user operations.
- Worked across integration, data handling, and product delivery in a fintech environment.

SELECTED PROJECTS

Fe Viva — Next.js, Prisma, PostgreSQL, real-time systems. Production faith-tech platform for communities, Bible reading plans, prayer requests, and pastoral dashboards. Live: fe-viva.app

Bocachica Heritage Archive — Vite, React, Supabase. Community-driven digital archive preserving oral histories, photographs, documents, and multimedia. Live: www.bocachica.tech

Botsito — React, TypeScript, Vite, Tailwind CSS. Educational chatbot for practicing English grammar with real-time validation, correction, and feedback. Live: danieldavidhenriquezjulio.github.io/chattbots/
